

644th Knowledge Seekers Workshop May 28, 2026

(Transcription, Editing and Proofing done by KF Brazil)

(Auto transcription by Elias)

ENGLISH TRANSCRIPTION

(:16)

K- Good morning, good day to you as usual, wherever and whenever you listen to these series of Knowledge Seekers from Keshe Foundation Spaceship Institute. We welcome you back and we hope you will enjoy the trip of the Soul this time. And we'll see what we need, what we learn and what we have in the ?? Soul.

As we're developing to understand the process of the Soul of the Man (STM), position of the STM, and every other thing to do with our Energy side, the side we ignored, we go back, step back, and understand more about the process. The way the Soul of the Physicality (STP) feeds the STM for it to mature, to find its time, place and destination. In the larger scale, the STM is the STP, as we said, of the planet. Which means the Soul of the solar system (SS), which is the star of it, which is in the center of it, becomes what we are working for. It becomes the next line to the dimension of the Creator. But, how do we as individuals, individual Souls, individual, what we call, structures, participate in shaping the Soul of the Creator (STC)? How do we become part of what we thought we are none of? (:18) And what would happen to us as a human race? There is a conscious understanding that there is 9 billion of us living an extremely fragile life on this planet, a car, earthquake, tsunami, a meteorite can bring this to an end for one, for many, or for all the citizens of this planet. The reality is, what would we leave, what will happen to the Soul of the Humanity?

As much as we are a Soul of individual person as we are, we are that cell in the womb of the solar system, like the womb of the mother, spreading, multiplying, creating more cells for the Soul to be created of a life in the Universe. In a way, when our Soul departs our physicality (P), it carries a number of RNA's, with no DNA, till it finds its physical dimension. One of the loads on this RNA is the information of the STM, it's a Man, and it's got these characteristics. Then we carry the RNA of the, what we call the Earth with us, (:20) uploaded on top of, within the structure of the plasma of the STM. On top of that we carry the RNA of the information of the star, the solar system we are in, and then to the Galaxy, and then the Universe (U). And then, we become part of the Unicos. In a way, even though we think we are alone in a room, locked up, crying our eyes out, "I'm alone, nobody loves me." You're actually part of a massive structure, which is like that cell on the blood of the Man, which is moving around to itself, it's just some cell, I'm moving around, I'm doing something, it's the body of the Man. Even though you're sick, you're ?? unemployed, you're a doctor, you have all the titles on this planet, you as an energy, as a Soul, are part of the bigger structure. You're carrying the DNA of the Man in a physical dimension (D) on the sickbed, but you carry the RNA of the whole Universe in your journeys in the Universe.

So, when a Man's Soul appears in a certain position with the people who understand the Knowledge of the Universe, they can say, "This is a Man, comes from planet Earth, from the solar system, from such and such and such a thing. We identify stars and galaxies from the other galaxies and everything else in the physical dimension we see, but then they see the energy side, the dimension of us exactly the same. (:22) There is a trick in confirmation of physicality. In the physical body, we call it the gravitational field of the Earth, which is the Soul and then the trick is this thing which you have never thought about, Inertia. Without the Inertia there is no manifestation of the gravitational field of the Earth. Without the STP there is no manifestation of the STM and the same without the STM, there is no manifestation of the planet and the rest of it. So it comes to us, we are all connected. And if one goes wrong, the rest of the structure shakes on the top, become the story of the building of the Pisa. Nobody sees nothing wrong, but under the ground there's a weak soil which shifts the whole thing to the wrong side. And that soft soil is the conduct of the Man.

This is why we go back to the Ethos of Mitra. Do good, Think good, Act good. But you have to understand, Mitra wasn't the first one. There are many Mitra's before Mitra, is a concept of understanding the process of the Creation. The problem with the Man is, if you can copy it and wipe it out, nobody knows what you copied. It becomes original you. And this lies, lies within the STM, (:24) and then it carries down, and it becomes worse and worse and worse, as more and more copies of the wrong thing are created, and we see in the dimension of the creation of the Man.

If you look for example in Christianity, the Virgin Birth and the everything else, which goes with the '12 disciples' and everything else, goes back to Mitra, and it goes back to other one, and another one, it goes back to 7,000 years. Christians or the Romans had the money to wipe out the story of the ones before, but they could not wipe out what they set to do, and then what they created as a Pope and the Vatican and the rest of it, washed everything out the way it looked. Conquerors always write their own story (history). And this is how your Soul is. Once it's imprinted the wrong way, it goes wrong, doesn't matter how many generations, how many other Souls you share your Soul with, your energy with, and the ?? 4th ?? ones.

So, you have to understand as Knowledge Seekers, this is not teaching of the Ethos, this is the teaching of you, yourself, your physical dimension and your energy dimension and where you bring this to be as part of the understanding of your own creation and not separated that one day will do. I was talking just before the teaching with Rick, but I tell you another joke which is coming up which is really funny and is circling around, when are we going to see robot priests? Now, what can the robot teach about ethics? (:26) What Soul does it carry to, for it to teach the human race about the Creator? Then you understand how fragile the life of the Man is. Would our robots go to church? Would our robots pay to church? Or would the robots become the priest? I was talking to a very religious Man in past 48 hours, we were passing a church and I said, what are you going to do now with robots? How does the robot will take over and what would be the belief of the Man? At the moment we import black priests from Africa to teach the white Man in

the white churches of Europe as there is no enough white Man left to become a priest. Would we employ robots, which have no Soul to teach the Man as a priest in the churches of God? This is not a joke, this is a reality.

Then you understand how far the STM is important to the whole structure of the creation and confirmation of the Creator. If mankind comes to understand how ?? his STP is crucial, is that Inertia for manifestation, confirmation of the STM, which is the Creator within, then you understand how fragile is the structure of the existence in this planet, in this Universe, (:28) and in the whole of the structure of the fallacies of the creation of a Creator that allows Man to be frightened of, when in fact it's the Soul of him and he's frightened of himself. This is what the priests keep away from you, this is what the Mullahs keep away from you. This is what they are all scared of you realizing you've been robbed. You've been robbed of the essence of your creation which is your energetic side, you call it the Soul. By telling you, you deny this, then they can control you. And this is what has happened in the name of the religions, in the name of God which they have no bearing in the truth, because you are part of that God, you are part of that creation. Denying always, don't forget, the abuser tells you it's your fault, that I'm abusing you. And this goes again down with the STM. Man fooling himself with his STP and then allowing the religion to ?? rub it off. Now you fooled yourself, let me fool you when we are all thieves. Nobody can say who's stealing from where.

This is the structure that brings forth a new understanding. A new understanding in the structure of the life. We have to understand the true living, not the dimension of physicality. And understand how it's controlled through what we call the emotion. Or from the interaction of two different levels of energy. In the world of physics we call it potential difference and it gives you whatever. Gives you electricity if you drop it from the top of the what we call, the fall to the bottom and you collect its energy. (:30) In the world of other things we call it kinetic energy and we call it everything else, then in the world of the Man we call it emotion. One higher point being the STM, and one lower point being the STP of the Man, Man calls the Spirit. And that creates the emotion. And then you understand how your hair stands up when the emotion gets in touch with the dimension of physicality, through the interaction of understanding the field forces of the STM and the STP.

Next time when your hair stands up, go back to the Soul and say, "What have you done with my STP that this has created this emotion and what we call this commotion of my body?" In a way, if you understand it, the Soul and the, what we call, the seed of the hair on the skin, is the radar for the interaction of the emotion between the STM and the STP of the Man and the fallout. This time you cannot create a mountain, it gets your hair risen, you say, "Oh, look at the back of my hand, my hair is standing up." Next time this emotion does not have the strength of the frequency of the hair, body has of the prostate and what happen when the two emotions doesn't go? Voila! You create understanding in solidification to show yourself as the seed of your cancer. The same with the mother. And then now you understand how fragile the life of the Man is. How the interaction of the fields of the, what we call the STM and the STP of the Man, needs to manifestation of emotion and dimension of physicality of the Man. (:32) Even if Man understands this in

the dimension of the health, then he understands that everything Man gets himself entangled with, being this cancer, being it high blood pressure, being whatever manifests itself from the essence of the emotion from the interaction of the dimension of the STM with the STP.

Then in the term of science if you go back in the teachings of the Wellness in the past with the sessions of the what we call Wellness applications, then you understand how Man behaves even emotionally when the field of the Soul of the Earth interacts with the STM and he drives Man crazy, he drives Man into dimension of not understanding. But at the same time, if you understood this, you understand the concepts of where we know that the interaction of the energies of the STM with the solar system leads to the creation of the energy at the strength that it touches the STM and the dimension of physicality of the Man. But this time this energy transfers through what we call, 95% weight of the Man which is that Hydrogen and Oxygen we call it the liquid of the water. Once the world of science understand what even H₂O has to do with the energy and confirmation of the emotion of the Man and the energy of the STM, Man will commit everything to his power to meet his Creator, because the Oxygen is of this planet and Hydrogen is a connection of the fields from the Creator. (:34) That the actual energy comes from the Eddy current, you call it, which goes from Hydrogen to Oxygen and not from the energy released from the Oxygen to Hydrogen.

If the scientists understand this concept and understand the principle behind the two-way energy where the separation of the water with the body of the Man, with the light of the universal condition, be it on the strength of the universal field energy or the daylight of the day of the Man, then Man understands that one feeds the Soul and one feeds the physicality. Then you understand why Man releases what we call Oxygen in the dimension of the Carbon CO₂. Man needs a lot to learn. Where one feeds the Soul through Hydrogen, then one feeds the physicality of the Man through Oxygen. As it needs more, but in fact, it's the bandwidth of the energy of the STP which Oxygen uses, where the Hydrogen in the splitting continuously feeds, maintains the life of the Soul. Now maybe you understand why you need water, now maybe you understand why you breathe that air, to create the connection to feed both. Where the dimension of the, what you call, energy division of the STM and the STP of Man, creates the Inertia of the physicality of the Man, in manifestation of itself, in the dimension of emotion, in the dimension of the STM.

Now, maybe, as Knowledge Seekers (KS), you come to understand how fragile your life is, how and why you are so dependent on that water. Don't get water, you die. Don't breathe the air, you die. Because one needs to divide and feed the Soul and the physicality. (:36) And one literally just needs to 'tinkle and tankle' with the vibration of the heart of the Man, and what we call the understanding of the frequency of the STM. One day mankind will understand this knowledge, and once Man understand this, he will not travel, he transmutes, because he decides which energy he give to, to encourage the, what we call, the movement of the energy of the STM.

If you ask yourself a single question, "What feeds my Soul when leaves this planet?" There is no Oxygen in the Universe for it to breathe, except connection to the line of the Hydrogen of the Creator, and the communication ?? light connection with the dimension of its physicality which comes through Carbon 14, 16, 8 and 6. I made Man in the image of Myself, because Man is My image, is My manifestation through My emotion. This is why I created Man through the love of the Mitra. The love of Mitra is the emotion of the Creation and not the physicality that Man has attached to it. One day I'll teach you how to create both at the same time, but Man needs to understand why water, life, is part of his connection. And this is the same anywhere in the Universe. Without dimension of the Hydrogen, Man has no life, it does not exist, does not connect, and it's impossible to exist as a confirmation of the plasma in the Universe. Those who reach that point, they become what we call the fields in motion, the energy of the Universe, and the creation of what we call the next cycle of manifestation, the confirmation of the Creation. (:38)

Now you understand more why everything in your physical life is connected to what this planet and then this Universe provides you. It's not just that the air you breathe, that the water that you drink, which connects you to your Creator in dimension of His physicality, but at the same time, on the bandwidth of the Hydrogen, you invite, you absorb, you use the energy fields of the Universe that connects you to your Creator. Now you understand how Man has been as usual so involved in the confirmation of physicality, and forgetting about the dimension of his energy fields, which is the creator and the feeder of itself, the STM. If you cut, feed the Man the water, feed the Man everything he wants to eat, but makes a Faraday Box that it has no connection with the Soul of his Creator, Man will die.

We will show this. Fill up the room with water, fill up the room with all the gases it needs, but cut Man from the source of his existence, his Creator. In the Faraday of the life of the Man, the Man will die. He cannot survive because he has no string which attaches to its Creator. Isolation of the Soul is the worst punishment to the life of the Man in dimension of physicality. Doesn't become soulless, it becomes non-existent. It cannot even manifest itself. One day we show this to those who commit crimes, those who do what they are not supposed to do, build their own Faraday cage. (:40) One day you will understand how and one day it will show how Man has come to the point of looking at the dimension of physicality and has never feared and actually the worst noose around his neck is that dimension of Hydrogen to his Creator and that dimension of the air he breathed on this planet.

Man has to come to understand, sooner or later, the World of Creation will confirm to Man that his conduct, his life, his understanding, connects it to every living things across the Universe. As it says in the Liverpool song, "You never walk alone." Because the one who walks with you is your Creator. We'll go for a break. And when we come back from the break, we try to understand the Totality and in more depth, the understanding of the creation of the Man. Then you understand why we start feeding you with the energies of the Universe and not material condition of the physicality of the Man. Rick, can you take us for a break, because I think you guys got a lot of shock in their system. They understood the true teaching today.

R: Okay, thank you Mr. Keshe, thank you. We have a special video to play for our break here, and having to do with the Chinese agriculture. So I'll play that, and I'll remind our audience that we will have an opportunity to ask questions of Mr. Keshe, after the break, and to do that, if you're an attendee here, you can put up your virtual hand, (:42) and then we can allow your microphone to open, if you'd like to ask a question, otherwise you can text the questions into the webinar chat, or into the Q&A in the Zoom here, or into the chat in the Youtube.

K- Can I just add something here. What you're about to see is the confirmation of the Keshe Foundation technology at the level which is today, and expanding in the Space City. You see different dimension, how Keshe Foundation has grown, and is becoming, and for the time being, we just show you what is developed, and what is owned by Keshe Foundation, and the operation. What you see is done by Knowledge Seekers, and the work done in China. At the end, and on the other channel, you will be given the link, where you can buy the products, only in China, because you have the other facilities. We cannot export these products out of China yet, but you see where the future is and what Keshe Foundation today is. It's not those little things, is what it has become, is becoming the center of the knowledge, and the most advanced way in the Space Technology. I hope you enjoy. Go ahead please.

(Plays long awaited video of the agriculture products produced at the new KF Space City in China, also known as the KF Research Center) (:43)

>> **BREAK** >> 644 KSW May 28th ... (:49).

R: Well, that was a lot packed into a few minutes. Very exciting development. Would you like to say more about that Mr. Keshe?

K- This is the Keshe Foundation Space Center in China. This is part of, but now become part of the Space City. We're producing seeds which have no fertilizer, no human touch. And the system is very simple. You have a link. If you're Chinese, only in China, you can place an order through this website link, even today. The product is already getting reached and going out to the market in China. And gradually we, the reason we do, and

we have set such a high class production is to create a pure seed with no genetic modification. (:50) If you're a Chinese you can take a picture and order on your WeChat and on the Alibaba line directly for your deliveries, the packages are there. But what you will see in the coming weeks and days in supermarkets in China. You go to shops in supermarkets, you have normal product and especially rated highly priced, buy your product. What we will do and what is said to be done is we ask the retailers to add a next section next to Bio (organic), as Cosmo. You will see Cosmo products across China and next in United States and in Europe. We'll transfer the technology across. As it's our own technology (T), we don't need any licensing, we don't need any whatever you call contract.

As you see, the package itself, it says Cosmo product and it's part of the Cosmic Ray product of the Keshe Foundation. But with the Cosmo products, you pay exactly, more or less, except special cases, the same price as you pay for your normal goods. Living a healthy life, living a correct life, does not mean to cost. And this is one of our targets. In a way, Bio, which you pay for, our villages people get free, a village life, but pay more for it in the civilization of the cities. With Cosmo, it brings the Man's, what he eats in the village, and what a Man eats in town, exactly to one. But this time, no contamination. (:52) This time, no hype on prices to bring. We charge extra, in some sectors of the Keshe Foundation, just because of the promotion and supporting the Keshe Foundation. These products hitting the market as a normal product should be exactly the same since you pay, but with the difference that these products carry energies which changes the emotion, it changes the health, it changes the Wellness, it changes everything else because you know you're eating something which not even the what we call, Bio which uses animals fertilizers are used. Because we don't know, they don't tell us how much antibiotic the cow had before we use this manure. With this process there is no such a thing. We do not transfer diseases from animals to us and then changing Man, what we call genetic.

You have to understand the purpose of this structure is not to sell goods. We set up this for the world to come and see. We already have universities, institutes across China, flying in, coming in, to see what the change is. Universities like Beijing Agricultural University tying up, other universities across China tying up, how we can bring a dream of a Man to reality. This agriculture land is not set to produce, to sell, but we sell, we produce, that we follow what it does, how long it lasts on the shelves in the market, how much changes it will bring to people. What happens to the people who consume this product, which changes their Wellness. It is not a marketing, this is introducing new technology on an advanced level.

What you saw at the greenhouse is one of the most advanced agricultural Hydroponics systems in China. (:54) Even the universities are aware of it. They are coming to see what it is, how it works, how can you grow vegetables without fertilizers, how can you just change the environment and receive it. This what you see as the center of the agriculture of the Keshe Foundation is one of the most unique, most expensive centers ever set up.

Next week or next couple of weeks you'll see the extension to this, how now we use the same agriculture for tens of thousands of square meters of Chinese herbs to bring it back to what it was. And these herbs will be directly for sale to public. And then you will see how we are interfering or we are interacting with the mass production with what we call the drones and the rest, which is already ongoing. It's not something we're going to do, it's just that our team decided to break it into parts. You see this part when we come. And this is all in one space, it's not different places. Tens of thousands of square meters of agriculture land is used, is paid, is operated by Keshe Foundation, is owned by Keshe Foundation. And we are testing everything to see what's the best possible connections.

And we already have had, an agricultural specialist who has stayed here for a while, and he's taken knowledge already to another country and as I said, one of the first spin-off of this technology. In a few weeks time we'll show you one of the most elaborate Space Centers ever, designed to work right in the center of a city, where the Space City itself is a model for what is to come. (:56) Space should not be out of the reach of a Man, Space should be out of the reach of the Man. Where you can fly your physicality, or you can arrange for your Soul, to travel the depth of the Universe. The same structure, the same highest level standards, is followed. Factories, research centers, development centers, all getting set up as you see in this video. Absolute to the excellence. We don't compromise. And now you know where your donations, and in buying goods from us, in helping us, as we brought the Keshe Foundation.

When you look at this picture, this is the edge of science in agriculture. Universities in United States and Universities in Europe dream to have such a thing. And now it's owned, run and developed by the Keshe Foundation. In this center, as you can see, everything is controlled by us. The water, the air, we can change every combination we want to see what effect does. The purpose is to create pure seeds. That when we do the, what we call, transmutation in a few months time, and when we feed you through Apps, that apple which is energy was used for the apple, for you to eat, to transfer energy, carries no fertilizers, carries no additives. It's as pure as the God created it. And as you can see, we use the latest technologies.

Whatever you've seen on this video, and what it comes, is on, run, by Knowledge Seekers, by Keshe Foundation. Independent of any government or any other organization, that they do not interfere. We take our losses, we learn from our mistakes, and everything is done according to the book rule of the Keshe Foundation, and not by any other order. (:58) And many institutes, universities have become aware of the change in the science of agriculture as you see. I hope you enjoyed what you see and this time we don't rely on no one and we don't let anyone break it up. And I hope when you see the one of the most advanced research centers ever built in next few months, then you know where the Keshe Foundation is going and you can become part of it. Collaborate with us, bring technology to us, and we develop it, and we get it back to humanity the correct way.

Thank you very much. And I tell you one thing, these lettuces you see, you can't stop eating them. They have a magic addiction attached to them, that's so, so amazing. Because every time I walk into the research center, I get handed over a bag of it, and by

the time we walk few steps, ... there is another bag? And you can see it, everything is Space now. Keshe Foundation is a Space Technology Development Organization, and now you see how we set it up. If your Chinese enjoy it, or if you go to China, find a place to order it, and then you know what the difference is. In the very near future this will be developed and marketed, the same way through Markray Corporation of Keshe Foundation, and our arm in Austria, through the Keshe Foundation central office.

Any questions?

R: Well, a question comes to my mind Mr. Keshe, which is, "Can a Man exist on lettuce alone?" Is it...

K- More or less, yes. We can change it to anything you like.

R: Right, well maybe we won't need necessarily a variety of foods, (1:00) if it comes right down to it, maybe the nutrients and, well, the energy itself, from the Cosmic Rays and what not, that's embedded in the lettuce, maybe that's enough.

K- We already are developing that system. That's a very complicated system, it's already not to be developed, it is partially built, and it'll be completed maybe next month or so. Where, within one system we can develop every enzymes, every vitamin, every hormone in the body of the Man at the same time. It's not a dream.

R: You can probably make the lettuce taste like hamburger for those... who really miss it.

K- More or less, yeah... Yeah, yeah, you can taste it, anything. Because it's just... you feed what the lettuce gives you, what you create the emotion of, what you're looking for. Now, those of you who criticize you (because of) Keshe Foundation let them see what's coming up, and what it is. We are not here to prove anything, we are here to change everything. The Keshe Coin (KC) comes on the back of this technology. When we tell you, we evaluate the Keshe Coin as 1,000 Euro, now you see how it is backed. And the whole team of management is now in this, international management team from different countries in China. People, experts, they have flown in. And we have people just coming in, helping, advising, staying for a while, going back and remotely, even teaching from remote, Knowledge Seekers, remote in China are teaching. Because don't forget these guys you see here on the ladder, they're not Knowledge Seekers, (1:02) but they're getting taught the work of the knowledge. And they're puzzled how you can do this.

We see, we get pests, we get parasites, we get weather conditions. We don't panic and jump into, "Oh, we have to find a chemical." Now we look what we have in the world of science of the Keshe Foundation. And we dig into it. We lose harvest because of an accident or a pest, we don't panic. We find a solution, how we can change, then we promote it. And this is already has happened. You'll start seeing products of the Keshe Foundation, in China and outside, especially for farming. They don't need chemicals. You have to understand how to use it, how to touch the Soul of the material, and ?? how to touch the physicality of it, when it changes. Now you see what we're dealing with and

where Keshe Foundation is. We are a Space Technology, we work at the Space level. Universities are envying this Space Center. This Agriculture Center is the envy of the Universities. They want to get the graduates here, they want to see what the next step is. Producing food without fertilizer, without chemicals, at a price that every Man can afford. It's a dream which come reality.

Any questions?

Q: ... Just look at the vibrant colors of the plants.

R: And that's something that occurred to me as well, that many of the images we see are, is very vibrant. They're obviously very happy plants, they're... These ones over here are especially... deeper green and so on and... (1:04)

K- It's taken nearly 5 months, to bring this land, took about 3 - 4 months to bring this land, into Keshe Foundation agricultural level. You'll see tomorrow, maybe next week or the week after, the Chinese section is huge, it's gigantic, it's 25,000 square meter greenhouse. It's one of the biggest in China, I think. And hopefully, next few months we move in, next few months we'll move to about, something like 300,000 square meter and up to 1 million greenhouse. All done the same way. It's not just the land, land had to be prepared. You see the whole area is being worked out in, you can't see it maybe, you see it about, under and over, is Gans technology. The glass house is covered inside and outside, to create a condition. It's not just the thing we're creating there. This is part of the colonization. How do we change things in colonies, in the Space.

It's something like 10, 20 different tests is going on. On this front, we measured the temperature in this greenhouse. We have a greenhouse next door, which is not ours. It belongs to another company. We measure what's the temperature difference, what's the emotion difference, what's the humidity difference. How things grow here, our scientists continuously, our agricultural head of agriculture, continuously is in touch with the other farmers who are growing the same thing, with fertilizer, we're comparing, what is the difference, and everything is done. It's not all hunky-dory, it's a lot of work. (1:06) This center will have about 3,000 scientists working by the end of this year or so. All, all under control of the Keshe Foundation. We don't compromise. We lose harvest, we have pests. We look into how we can do it through our technology.

In the section you most likely see in the next couple of weeks, we have set up and we're setting up fishery inside, that the fishes live with the plants inside, and how we can change the life of fish without any food, we don't want to feed the fish. We create a condition of creating food from atmosphere for them to eat. ?? When you cut this harvest in front of you, this usually takes about 69 days to grow and with the other farmers we are comparing. From the time the seed to harvest is 69 days. We have harvested fully at 39 days. We reduced the growth time by 50% more or less. And this was the first run. So we are learning and then we introduce it. But the quality is there. It lasts longer. We look at how these people working on it, how psychologically they change. Do they sign for off being sick. We know from our other trials, what we call, the sickness knows why

agriculture is working, the environment has come to zero (sick days). They want to be here, it's just they get addicted to the environment, they enjoy working.

We are monitoring everything. And as you see, this was something left for years. (1:08) No organizations like to work in these greenhouses. It has huge problems. And we took the challenge, and we have proven to be correct. These are European greenhouses and do not work in China. And they bought hundreds of thousands of them. In one area is about a third of a million. Nobody wants to be in it because they cannot handle it. Winter needs a lot of heat, summer is a lot of cool. And you can see in the summer now in the heat of the thing we are cultivating. And we see, we learn from the failures and we learn from the success. But it's not matter, we just want to transfer the technology to worldwide. No fertilizers, pesticides or herbicide. And the results coming from other countries' research is amazing. We'll show it very soon.

Technology used and it all decentralized in China. Because, evidence of this ?? is provided and we have a beautiful management. The CEOs of the Keshe Foundation are amazing what they are doing in China. It's not individual anymore, it's a team, and it's a team of international team scientists. Some of you know, you edited these videos, some of you have decided what goes in this, you've been there. Everything is the science behind it, done by Knowledge Seekers, and then... literally, the people who worked there, gradually convert into it, because they can see the change. Once you see this research center, you'll be shocked. The world leaders will come to see what is ?? bringing them to change, to change their governments. (1:10) Let's see what comes up.

R: Showing by doing. Very good, Mr. Keshe.

K- We have to show the way it's there. It's not a talk. We tried in different countries. Now we've closed all operations, all concentrated in one area. We have a full support of the local area. We have huge support in the background from CPC, who is supporting us in the background, extremely high. But it comes down, they just show themselves as the local area working. These are part of the structure of 10 years of work in China.

R: We did have a question about what is the Chinese government reaction to these factories? And will this expand to the meat industry and eggs and beef and so on?

K- Gradually. Yes, we touch the fish. We have to produce a food. And you will see next week. We are producing, we are taking part in section, we are comparing. In the same, it's just few meters away from these buildings. They're all concentrated in one side. Where they have cultivated 10,000 square meter of land with wheat. And they've grown it for over 100 days. And now, we have taken for the last 40-50 days, a third of the section using Keshe technology. We have positioned, we bought our own, what we call, 80 or 90 liter drone, which, what we call it, sprays, a few times a week over the land, which is our part, and then, when the harvest time comes, we compare our harvest with their harvest, (1:12) which is two ends of the same farm, we ask the... We actually, when we bought the drone, we had to send our employees to learn how to use the drone to be there, and most probably in next week or so, you will see we developed a technology that the drone

attaches or sits on the platform which is made by Keshe Foundation producing Gans's on the spot, or Gans waters on the spot that everything is remote, you can place it in the middle of the nowhere. And the drone lands, feeds itself gradually and then sprays and comes back and reloads itself. You'll see It's already completed, and it should be in position, you see, next week or so.

Everything is done to make the need for an excuse that it's too hard, too thing, all to be taken away. The technology has to be at the reach of every farmer, and our target is very simple, in China, why we are concentrating. And this technology, maybe in the next two years, it'll be one of the leading technologies in China, as we know what it is. In China, there are over 30 million farmers, only have 2,000 square meter to live on. That's all they have. They grow carrots and it fails, they grow tomatoes and it succeeds. That's their living for one year. And, the work we did in Inner Mongolia, and then we did other places, it became very clear. A farmer, what you call, the poverty line in China is 1,000, down about 2,000 RMB, which is about 300 dollars a year. (1:14) And 29 million do not read (reach) that. But, they get maybe a hundred, when they cultivate what they need for the year, and everything else, they get about maybe 100 in their pocket, because the rest goes for fertilizers, for seeds and the rest. The only way you can get the population out of the poverty, is that, increase the harvest and shorten the time, which we've done.

Now you've seen it physically here, we reduced 69 to 39, we've done that before. And instead, when now the land covers initial expenses, the next tonnage, one ton extra, that 800, 1,000, is in the pocket of the farmer. We don't need to do much to move 29 million out of poverty line to livable lifetime. And this will take the pressure from the government. This is why Chinese government has seen what we do. And they sit back. I work closely with CPC. When the result comes, we are collecting data, when we show, you say, it's 30, 69 days to 30 days. Now, even if you get the same amount of harvest, now you double the products, triple the products, because you cultivate three times. It's not the old way that the land will deplete. The land will never deplete because we feed from the atmosphere. So a farmer, instead of producing 1 ton a year and having 100, now a farmer produces 3 ton, maybe 4 ton, maybe 5 ton, and he gets 100 plus another 4 or 5 thousand on top. Nation moves out of poverty.

This is the biggest problem with CPC. Keshe Foundation technology is ingrained in the 14 and the 15 national program of the China. (1:16) We can tell you this for the first time. Our technology is ingrained in the 14 and 15 five-year program of the Chinese government and now we are showing it. It brings, it gives a child a food on the table, it gives a child to live normal, not parents just what came of the land, that's all we have to live. This is the next step in technology. And this is why we are doing it, to show. And then promote the technology to be accepted, which is now is there, they cannot, what you call it, deny it. And then increase national contracts with the government through the Keshe Foundation becomes part of the national policy, which is now is part of it, now it becomes operation. And you will see the change.

We are there now in the next two years with this going, if it goes, everything that we planned to move 29 million Chinese farmers within the next five years out of poverty,

and this is the biggest burden on President Xi's, what we call, administration. They can do everything, they develop the most advanced technologies, but they cannot move these 30 million farmers out of the poverty line. They are doing everything, they may one year make it, but they fall. But now, it'll be done on their own hand, in their own land, and technology will be. The next step is satellite creations of the drones, which is on the card. We can do that through new technology. And you'll see it. No chemicals, no fertilizer, no pesticide, nothing. (1:18) And then when you change the environment, everybody does what it needs. As I said to a CPC guy on the table. He said, "How does it come?" I said, "That we feed it with the Rays of the Creator, it comes from the sky." Man never realize.

Any other question?

Q: ... Thank you for the amazing work. Are they grown using plasma aquaponics? Or are some also grown in soil?

K- You saw... you saw the second part is the soil, and this one is with the water. We have different facilities, when you look at the end picture, you see the lady harvesting on the land.

R: So the greenhouse ones are in soil?

K- Yes, yes, yes.

R: But the other ones are under artificial light. We had a question, is it LED or fluorescent?

K- It's all done. It's set up. It's LED. We control everything there. But that plant still needs a lot of work. It's just coming online fully in next few weeks, because it's a test area. That the ?? aquaponic one is very, what you call, extensively under observation. What we do, what we cannot do. It's taken us 5 months, more or less, since December to actually, gradually, in next 2 months, we'll come totally under the way we want it. (1:20) Everything has to be tested. A lot of Knowledge Seekers are spending a lot of time changing, even when you saw that nozzle spray, that is taking four months to get it sorted out. Just one spray, to be exactly where it is, it does what it does, and it's very complicated system this. This is not a very simple, but allows us to test in Space level, when we create the domes.

Here you see the operation in the greenhouse, we create a dome. We have a environment, we lock the environment, we spray inside and outside with drones, then we see how it changes, since we sprayed, which and what changes, what animals move in, what we do with the pests, what we do with the herbicides, and .. everything is monitored. The part you will see, most probably in the next couple of weeks, the Chinese agricultural herb, which is tens of thousands of square meter on the cultivation. We have brought for the first time open space greenhouse, which means we are inside the greenhouse, we've taken the roof off totally. And then we see, like in China in past few weeks, it's been one of the biggest floods, our greenhouse is literally swimming. We see what comes up, how the

problems of flood can be. Does the farmer needs to lose harvest because it was a flood? Or we introduce a system that it just carries on. And then they become national product.

You will see Keshe Foundation agricultural products in the next few days. And already it's in the market in a bigger way. (1:22) And the agricultural work and most of the next 12 months will be adopted by many, many government officials as part of the work. It's all getting data, data, data, data. And we need a lot of funding. We are supporting as much as we can. We need millions. Now you see where we are. Now you see it is not a joke. And this has taken a lot of effort. And it's a lot of energy and thanks to our CEOs and all the management, the board of directors and the scientists who are helping us relentlessly.

And it's not just in, you have agriculture, you have the Space, you have the water decontamination, you have the Keshe Coin, these all have moved in this area, they're all working, it's not something we're going to do. The newest Keshe Gans factory which is getting set up is Space level when it finishes. It's not the way it was when we were in ?? Desenzano. Knowledge Seekers are flying in, advising what to do, getting a structure, testing and the next step, the next products you will see very soon by September coming up. These things take time, months and it costs millions. These laboratories, these research centers are not free. We have not been given a single cent by any government or any organization outside Knowledge Seekers and our own support. We don't accept, because then they want to change our policy, they want to bring their way to stop.

And when you see, we had some visitors today into the new Space Center, and they know what is coming in. Don't forget, this comes free education. (1:24) All the scientists who move in with us, their children get a totally free education at the highest level. And as I was talking to the head of the school which is taking over this morning, Keshe Foundation Technology is part of the curriculum. It's not off book. Very soon the team the education team will ask you to join in to apply come to China and set up the curriculum. All the things you've done in the past, education group, the school groups, now what you did become harvested in Keshe Foundation, what we call, Montessori starting class. And we are preparing up to 3,000 students which means you can see each family comes with one or two children from 18 months to 18 years. And most probably we can support the university, and near into the university. It's all getting done, it takes time. Today we had the head of the school from another city coming to assess how we set up and what they need. And that education today in China is about twenty to thirty thousand dollars per head, totally free for every child who works, the parents work in the structure. We pay for it. It's getting set up.

Any other question?

Q: ... My question today is, (1:26) can you please expand a little bit on the salt that we collect in our reactors? Every time we create a reactor, after a while we have that salt sticking on the plate, on the coil in the reactor. And it would be nice, have some more information how to use it, this salt, and how to handle.

K- This salt, it has a specific application. And it needs to be handled the right way. We harvested ourselves and we use it when we need it, extensively. But, we realize when we give such information, Knowledge Seekers abuse it. And then it creates more problem than solve a problem. If you gather these salts, hold on to them, one day in the future, we might even ask what Gans's salt you have that we want to buy. It's not easy to produce and it has huge implication and application, huge implication. We harvest every grain of it when we can. But you have to understand how to use it... Sorry I'm not trying to be... just... I'm just trying to explain to you that exactly what is needed. (1:28)

R: So the coil that we see here Mr. Keshe, is that coated with salt or Gans or...

K- No, no, it's just a normal... it's just a normal coil. It's just normal coil. But these coils are just there for being there. We have a different structure in this area and new things are getting tested. We just try to create the environment. It's like the one you use at home. And it's just to be part of the testing and it just it just happened to show it there, but in fact is the structure of the work.

Q: ... The agricultural side of it which is amazing. I'm just wondering if I approach some of the big glass houses here and introduce this technology to them with a bit more information, maybe a copy of what we just shown and then getting to contact the Keshe Foundation, that be a good idea?

K- Yes, just give us a few more months. You know one of the Knowledge Seekers was an expert on this, is near you. He's closely working with us and he's already been to the plants. He's taking, we'll be taking his advice. There is a lot of things need to be sorted. (1:30) Maybe in three months, six months time. ... Go ahead.

Q: With my fruit trees, they're outdoors. So I'm just wondering, could I suspend coils between the trees or...

K- No, it is, it's, we, we, we are testing now. We have seen increase of harvest by two to three times. But the other problem is the pests and what other things we get with the fruits, with the trees. This is all getting assessed and everything else. Give us a few months, give us a few, two, three months or so. We have to go through a full season harvest to know where the problem is, where we have to sort out. But I've seen pictures from trees which two doors down in the same farm area, the harvest is unbelievable. Because it's a spring, it's a beginning. We have to see how much of the harvest matures and how much is empty, how much is not what it's supposed to be. Is the plant supporting, can plant support such a huge harvest? If the tree for 20 years built itself to carry 100 kilo, can he handle 400 kilo? You understand?

Q: Just thin fruit, Mr. Keshe, just thin... If it's too much fruit, we have to go and thin it. You know?

K- You can't thin it. We've seen it. What we've seen on the field now is impossible to thin it. It is, it is, we are learning, we are learning. (1:32) We have an expert in farming with

us. He is an amazing guy. He came, he's not a Knowledge Seeker, he came to help us with agriculture. He became a Knowledge Seeker and he is testing a lot of things for us. He is one of, as I said, the first spin-offs of the Keshe Foundation going to him. But this guy eats and breathes and leaves through agriculture and we are testing, we are testing and give us a year we have to see.

It's very easy and you have to understand while we test we give these things to the farmers and they test their way, but they don't tell us, and then we only get to know when they run into problem. And it's happened to us many times with agriculture. We showed in Inner Mongolia we can increase their harvest two three times. Then we went on a hundred thousand square meter land. The Agricultural Committee on this land they told us they don't want us to interfere. They just want the material and Xiaojun went there and gave them the material, help them or whatever, and then they took it somewhere else, and they did the thing they want to do, they learn what to do. Then, when it came to the summer, just before harvest time, we had them shouting and crying, "What is going on? This, this thing is something wrong with it, we had a hurricane like things, no farm around us, is changed, touched as such, but all our wheat and harvest is on the ground." I said, "Why? What happened?" "We don't know, it's just that." What these clever people did, it's in China, in China. (1:34)

They took our Gans's and they brought their own scientists to innovate and try different things with it. They looked at it as a water as a fertilizer. They never understood this is a field system. So by mixing the wrong things in the hundred thousand square meter, they create a magnetic wind. You understand? And this brought the harvest on. There was a rain, there was storm, the lands next door, all the harvest was perfect. Only this hundred thousand square meter and little bit around it were flattened. Because these clever people, they took, they mixed the Gans's, and they don't understand, this is a field work, it creates its own wind, and they created the wind, and flatten their own harvest. I told them, just wait seven days, the, the, the wheat will stand up. They said, "No, it's impossible, when it goes, it breaks." Seven days later, it stood up. You understand?

So, we have to learn, because it's the field forces which brings it up. And we have to learn a lot. We are at the beginning, now we are structured in one of the most advanced, not the one of, the most advanced research center in agriculture, in the Hydroponics, is what you see at, at its own by Keshe Foundation. To build such a center outside in Europe, we're looking at 10, 20 million dollars. We are given a gift, and we use a gift and we try to understand it. You don't see a Space Research Center at this level anywhere on this planet, except in China and in the hand of the Keshe Foundation. I've been to universities, (1:36) I went to Beijing University Greenhouse. It's a Mickey Mouse, one level, they put it in the container ?? it gets contaminated. They come here, they go crazy. It's, if you look at it, it's 16 rows and each one is double-sided. That makes it 32. And each row is eight level up.

What we are even looking at this is that, what's the difference between the production of the top level, bottom level and the ones in the middle? And then if you go to the next frame, what the next, the research is going on with, we are observing, if you go to the

frame where you see the inside, yeah. Now we are considering, we are actually not considering, we are testing. That we are monitoring the one on the right, let's say it's the one near the middle, near the windows. How much the harvest is that? The one in the middle, is again Gans's. We are monitoring how much the Gans is in the middle row, and the one on the left row, we are watching that how much is that one. Because the one on either side are in touch with the normal environment, okay, the Gans's. The one in the middle is totally Gans environment. Do the plants grow faster? Do they grow different?

We are looking at the roots, we are looking... This is one of the most advanced research centers in Space Technology Agriculture. Americans dream to have such a thing. We put our finger print down, you should see what we are building in the Space Center. You don't need to go to Cape Canaveral, you don't need to go to Space Centers, you fly from the roof of the Space Center. (1:38) And we have that opportunity and thanks to those who are behind us, those who are supporting us, this is what is delivered. We don't waste a penny. We need millions to stay independent. But the good thing is now, in the next 6 months a year, the agriculture and the other parts start paying for the research to expand. We sell these products. They start bringing income.

They start... and when you work at this scale, it brings enough in 6 months, almost, to support millions of researchers. And this is one of many projects which is ongoing in the Space City. We decided to show the agriculture first. Then you will see the Wellness Center, the Space Center, the... everything, the manufacturing. The only thing which will never open up is our production. We use very secret, very highly classified, confidential techniques, we will develop ourselves. Which you will never believe it. It's part of the control of the system technology.

Q: So, could I sell my fruit as plasmatic fruit?

K- Yes, you sell it as Cosmo. We give this license as a Cosmo product.

Q: Cosmo?

K- Yeah. It's because we use Cosmic Rays and it's easier because you have bio, now we have bio is what we call biologically, this comes from Cosmos Rays, the Cosmic Ray, we call it a Cosmo product... But you get the certificate from us that this is what you say. We gradually become authority in this in China and then around the world and this is another part of certification in the future.

Q: So, to be a Cosmos grower, (1:40) you would have to use a combination of Gans. I'm using One Cup One Life, but also...

K- No, it's much, much deeper. It's much, much deeper. Because, example, even on these trains, you're a farmer, the roots can rot. We get that. Immediately, we look at what we've done, what needs to be done, to change the root, even though we don't need the root. This is one of the things I'm looking at. Does the harvest changes above the ground if the root is damaged? Not really, because we're feeding it from the top. It's a lot of challenges, but

we are there as researchers. But now, this allows us to sell products, to finance the whole process. And we have a huge structure going around. Marketing people are getting involved, the sales are getting involved, officials are getting involved, government, CPC is there. I have the Chinese Central Command watching what we are doing, because this can become feeding the soldiers. It has a huge implication for military application, in feeding the soldiers on the front line. It's not just one thing, it brings a lot of changes. And the whole... I had a meeting with Central Command people, very recently, in Beijing, and they say, "We're just watching, what you're doing is taking breath from us, you dare to do it this way, we're watching it."

Q: That's great. It's really good Mr. Keshe. Thank you very much.

K- Thank you for all of you being behind us. You especially and others like you. You stood by us in thin and thick and now you see the result. (1:42) And there's a bigger thing to come. Much bigger. We need at least 25 million dollars in the next 6 months. And then gradually we stand our own. It's licensing, furnishing, buying equipment. It's not, when I say we need ?? 25 million, "Oh, the guy says he can make gold." I make gold, it just vanishes everything we've done. They go for us, they destroy us. This time we're coming from bottom up. Agriculture, food, Wellness, Space technology on the other end.

Any other question?

Q: ... How are the plants pollinated? But for most of the plants that I've seen, they don't require pollination.

K- In the tomato side we use bees, bumble bees. Bees do not survive in greenhouses. Bees are good for open land. In greenhouses we use bumble bees. We had to bring them in. We learned a lot from it. But we have to see actually do we need the bumble bees. This is something our agricultural guys wanted. The fruits are not and it came through an incident. We .. our bees are dying in the heat. That's one of the biggest problem bumble bees. So we are watching to see if we're changing the environment we actually get the fruits. We have, we had no bees, but we have a beautiful cucumber products, harvest. And so, do we need the bees? Not the way we cultivated, but we have to keep. (1:44) (Ah, wait one second, just, just one second. Let me see). This is a picture which is just coming from us, Agricultural Center. (I say, it's easier for me to send them to you than you, what you call it, than me doing it. We can post these two, that's just coming, that's today's harvest. I have a... where are you Rick? Two photos going up, going here. You can put this, this is the harvest of today. Have you received them?)

R: Yes, just got them.

K- And this is what it comes in. It's from where you saw the ladies, it's part of the same thing. greenhouse. And it's not just what we call, those are the tomatoes from the greenhouse and then you have another one. No fertilizer, no, with the, with the cucumbers there were no bees, and you see this is amazing. (1:46) And these are the cucumber today's harvest. Agriculture can be done without fertilizers and pesticides.

These cucumber plants were nearly destroyed they had a white mold fungus on them the whole plant. It took us a week to find a solution in what we call Cosmic Ray Technology. And now that, this process will become a product marketing next year. Because when it comes it destroys the cucumber and they have to throw it out, or they have used a very heavy chemicals to destroy it. And now it'll become as a product sale.

If you're Chinese, go on the website, these are all for sale. Some are a little bit expensive, because we have to cover a lot of expenses in the markets. When they hit, they'll be as normal as the other products. And now you can see. You only can order through in the Chinese channel. And we cannot export them because of the restrictions around the world. But you can see what it is. We had some cucumbers which are slightly bent and whatever. I said, "Just pickle it." We sell Keshe Foundation pickle products, because it's theirs. We don't need to bury them, dump it or destroy it.

R: So you'll have a new saying, "Pick a peck of pickled plasma products."

K- Yeah.

R: Pickled plasma pickles.

K- This is what it is. So you see the harvest in China, this will go extensively. It's just that... It costs a lot of energy. And it's beautiful what you see. (1:48) Literally harvest pictures and around the world you can see what is there. And we want to see how long these tomato plants will harvest, because in some of the Chinese greenhouses they do these fancy tomatoes, they last about six months. We want to see can we go around the year because we saw it in the snow in Iran we still could harvest tomatoes. We are going.

Any other question?

<< Hand raised by mistake by a Knowledge Seeker. >>

Q: ... The Keshe Coin is valued as 1,000 Euros. I don't quite understand how the value fluctuation or inflation can be eradicated, (1:50) if there's a tie to a National Currency. Or is it that the National Currency, it is tied to, will become more stable as a consequence?

K- This is a very touchy situation. We chose originally the Euro, because if you look at the Chinese Yuan, it's just one nation. If you look at the Dollar, it's just one nation. Euro is around 20 nations currency. And it gives us the base for the valuation. But very soon, maybe next year, two years, we change the backing of the balance of parallel of the Euro to another commodity, which is values the same. This is well, what you call it, well thought, it's just the opportunity has to come up. You'll find out the Keshe Foundation Coins, especially Keshe Foundation Coins, we are giving a thousand Coin to every person. The first batch, we are not going to what you call governments, we are not going to institutions. We directly, directly give Keshe Coins to students at universities around the world. These are the generation who understand and can work. So in next few weeks, when we start releasing the Keshe Coins, (1:52) if you're a student in university, get your

university to get in touch. Every single one of you receives 1,000 Coins. We need to back up. There is a lot of service and things need to be purchased and put up. It's not just a Coin with the ONN's which are coming out.

The ONN's I was told are ready to go in the next few days or a couple of days or a couple of weeks. Once they've done their test behind the back, then what we do, students around the world, universities get a standard level to spend money on their own. These are the young generation, they are vibrant, they understand what can be implanted, they can take it across the world they live. You are a student in university from undergraduate to postgraduate to PhDs, you are a professor in the university, you work in the university, you are part of the education system of a university, you have a priority to receive Keshe Coins and start spending it. You are limited, you are limited to 30 Coins a year, you cannot cash more than we give it to you. Every 30, every year we release the next cycle, but the thousand is allocated. We control it that you don't go out and suddenly spend everything. And it's that it's good for you, you're protecting you.

And then you understand that how a university chap in Africa has money to live. Doesn't need to move, doesn't need to cross the waters to die in the oceans, just because it's greener on the other side. And I estimate something like 1 billion Coins will be distributed in the next 12 months, first for students and universities. They bring the technology across the world. They force the government because they become a force on their own. (1:54) They pay to university fees, university can spend it, they pay in their domes, they pay for the food, they push the economy to accept it because it's their currency. And, has no government to restrict it. A Man in the University in Africa will receive the same money to spend as a girl in New York, London or Washington, or in Paris. The one in the South, you better get to know more, because he's got more money, he doesn't spend that much, he gets a thousand dollar a year to be a student in South Africa. Because 50,000 a year you have to borrow to live the rest of it. You better get yourself some partners in South Saharan Universities, but we already told them, "Be careful, don't be too generous, because what you save now, becomes your future."

And now you understand the next step of our plan. Once the ONN releases this month, the Keshe Foundation Coins will be distributed only at the University level, to the Universities, allowed to, and they become their investment. And then, we go to newly born mothers of children. We don't disturb the other one. Students, newborn children, that they are brought up in the right way, and then we come up the ladder, see where we can, education, schools. Every child in the school gets one, then stays. I suffered with this a lot in Gambia. I suffered a lot with this in Gambia, and I made sure it won't happen. The headmaster used to come outside the hotel which I owned in Africa, and say, "Mr. Keshe, 12 pound 50 was, if you pay me I can take a student in." The parent used to come with a list of the students, their parents. (1:56) "Can you take a 100?" I said, "Give me 500 students." And we used to pay 12 pound 50 for a child to be educated. Now it doesn't need, he has 30,000 with him. He's a value asset, doesn't need to sleep hungry. Now you know, I've been through it, I know it, and I found the solution to it, and it's the solution.

The pensioner, we look at it later on, the governments are looking after pensions. The one working, they have an income, student, they report, and... The schools get a priority in the distribution, but it has to be... you have to get the support of the governments. I already asked the Iranian government to support us, in list of the University students, and we spread, we'll go very fast. Because, they bomb us in our physics labs, we eliminate them, and we annihilate them through education, to give more to be educated at the higher level. Then it goes, Philippines, then it sits, South Africa. Sits, students, universities in African nations, South America. Northern Europe, most of the students get grants, they don't need it. I sat and watched thousands of them, yesterday bring a city center to a standstill, wanting more money, because they've been boycotted. They are the future of the nation. And we sit and watch and we change.

Those who are from some nation, poor nations, will directly interact in next few months, to make sure it's not a fiddle. There's a lot of fraud goes on, students don't exist. We set up a system that it monitors everything. University students are vibrant and they take the Coin across the world in no time. (1:58) Because they live off it, they need it, they get the shopping ?? to accept it. And if you go on the Keshe Foundation Coin, you have individuals, you have companies and governments, they all have to register, because they've all received their benefits. It's well thought, it'll be executed.

R: Mr. Keshe, we had a question about regarding what Trump has done against Iran and that the USA would not benefit from Keshe technology. So, are USA citizens allowed to purchase or interact with the Keshe Coin?

K- Of course. The only nation we will not allow to interact with Keshe Coin, is the State of Israel and Belgium. Any other citizens can, people who carry two passports, one from the other one, we'll find out, we know how to annihilate it, or make life hell for them. Don't cheat with us, because we know how to handle it. Two states will not be. All the Palestinian students across the world will receive the Keshe Coins immediately. All the Iranian students outside Iran, who suffered, will receive the Coins immediately, all the students from Africa. We don't separate, but we monitor. We are not building another state, government control state. We just monitor that the things go the right way. And... it just has to be. We've been very open about this is not something we hide. State of Israel, under no circumstances we allow a single cent to follow in, to be brought in, to anywhere, to touch, because they use education to kill. (2:00) Universities is a killing university. It is the same with the state of Belgium. All the research centers is where they kill the others to get access to technologies. I've been the victim, so I'm not talking because we know. And the rest of the world education, slowly, step by step, we release funds. We announce which countries, which students will become eligible for. The eligibility comes in our system. It's not that they are not eligible. It's what we can back up, that it works correctly. That's the only pitfall.

This... and the problem at the moment is, we're facing in past week, is these AI hackers, that we now, the ONN's, we have to add a AI firewall to it, before we send them out now, and that's another 500 costs, 530, 40 dollars, each one will cost us extra, to put a full good quality firewall on it. And it's the first time AI firewalls is available. As I said, "We

are lucky, if we would have sent the ONN's out two or three months ago, we wouldn't have had this. They would have hacked everything." Now, even it's one of the initial ones, at least we have some protection. We have two choices, between 200 and something or 500. I said, "Go for 500, let's see what we can. We have to protect the units."

Any other question?

Q: ... By purifying the physicality and seeking alignment with the STM, (2:02) might we also be correcting errors in other dimensions and or time as well?

K- Can you repeat that?

Q: By purifying the physicality and seeking alignment with the STM, might we also be correcting errors in other dimensions and...

K- Possibly, yes. Possibly. We are all connected in different ways.

R: As below, so above.

K- Yeah, exactly. There is no disconnection. That's what I said. If you always think, if I take up my air, I can't breathe, I die. They don't feed me, I die. I don't have water, I die. But it takes a longer time. Nothing you can see there, because it's not in the language of the Man. If you cut your Cosmic Ray lines going up to the source, which is a special dimension of the Hydrogen, you die faster than the Oxygen, instantaneously. You know you have death by injection, death by hanging, do death by fields, it'll be faster, painless, because everything stops. Even part of your body disintegrates, because it's connected to it.

R: Would it be death by fields or death by lack of fields?

K- Lack of fields. Lack of fields. (2:04)

R: You put a person in a Faraday box and that would...

K- Faraday box is not the way you think. Faraday box, we're talking about Cosmic Ray Faraday box.

R: And is that a physical thing? Is that a...

K- Yes, yes, yes, yes, yes, yes. I have built it. I know exactly how it works.

R: Can you tell us a bit how it would differ from a Faraday box, which might be a metal box?

K- Faraday box you have a professor, what's his name?

R: Meyl

K- Meyl. You have a... What does he call it? Scalar wave. And he says the scalar waves can go by the... Faraday box can stop things coming out, but cannot stop thing going in. And the scalar does, because it's a different frequencies in different wavelength. That's why it does. I stood with Professor Meyl on his laboratories in Europe. I was his guest for two days, and he even bought a building, a small building in the University, and he's got a little pool there, and he puts a, what you call it, a boat on the pool, and he says, "You see, the Faraday box says nothing but mind works." Because I said, "Yes, you're using, you know, the reverse of it." What we call is Eddy current. Eddy current does not go on the same frequency as a normal. It goes one shift, and all in a shift it chooses different bandwidth of the shift, which does not exist in the matter state. And this is the cleverness of it.

But you can build a Faraday box of the Rays of the Universe. It's very hard to make, but I've made it, it's possible. (2:06) The reason I have to make it, or I had to make it, to make it before, is that if you read the first paper about the creation of Black Hole, Black Holes are suckers of energy and they give in a ... They mush it up at a very high range of is other thing, to the ?? frequency, that two, three things which goes with the frequency knowledge of the Man doesn't exist in that part of the ?? don't get into it. That energy go into it gets mushed up, and it comes out at the lower field strength of the same. So, if you cut off the top range, nothing can come out. No Universe can be created. No material can be created. But the problem is that Black Hole will suck everything in. So you want to control it, what comes out.

You don't, in the world of physics of today, we control, we build the steel and then we put a machine, we mold it and we give it the shape we want. In the world of the plasma, we decide the mold at the beginning and then build the system for it. Which means you can block what comes in, that you already have the shape you want. And this is the Knowledge of the Creation. Man has not tapped into it yet, they don't even understand it. So, you make a Faraday box of a specific, ... a specific Cosmic Ray, which already gives you the condition and material you want to ?? get. Read the patent, it's in the patent, when we draw the patent, it's one of them. Creation of walls and product. But, now maybe you understand more if you read it. (2:08)

Q: ... We did have a question from Radek in the Youtube, mentioning that system used in China to produce Gold. Will there be a similar system to produce lettuce like that? Or is it something far in the future?

K- It's not far in the future, it's on the table. But when we produce, we produce the energy of the lettuce. It's a... it's just past couple of weeks I taught the Knowledge Seekers how to make it. We are developing a system that is what we call it... You know the French spanner fits into any bolts and nuts? It's like that, it fits to produce anything. So you don't need the material of it, you just need the emotion and the energy of it. If I can give you the emotion of the pleasure, and I can give you the emotion of the material, and in it, put

a banana in, you get the emotion of having the banana, and you already receive the energy of the banana. But that emotion lasts a microsecond.

R: Perhaps the products will become invisible, and you'll get just the packaging, and open it up, and you'll receive the energy.

K- Yeah, put your finger in it. There's a lot of knowledge, but it needs time and it needs... The problem with our research is that we are going so fast, and I was looking at it a couple of weeks ago. We need to split. The minute something we abandon, we don't abandon, we go to the next step. We have to put a team to carry on with what was abandoned or left. In the governmental structure, you have to get approval, finance for it, blah, blah. In Keshe Foundation, we put it down, drop it on the table next, because we came to the next step. What we left on the table has to be gone. (2:10) That's why, when you see the Keshe Foundation Space Center, and the, what I call, the spin-offs, we are trying to set it up in a way that we can take up to 3 to 10,000 new spin-offs in the first two years. Now you can imagine the magnitude and the size of buildings which is under consideration. We expect up to 10,000 spin-offs in the first two years, maximum. And this is part of it. Because we leave a lot of projects because next step is where we wanted it to be. But if you develop that part, it can come to a lot of things.

Any other question?

R: It was just occurring to me that maybe the packaging materials for your vegetables could be fuel for the home reactor.

K- Never know, at the moment we are using plastic. It's getting done and we need... we brought in a promoting company. They have to do a lot of things and then you have the sales team, we have ?? have those things. We desperately need the experts in different fields.

R: Plastics are full of Carbons and Hydrogen's. It seems like a perfect delivery system for the home disintegrator reactor?

K- We... yeah, we are looking urgently for somebody with the international and Chinese sales market, urgently. If you have a... not marketing, marketing we have brought a company in to support us. We need people with a sale experience that they can take this technology into market very rapidly. (2:12)

R: What about the issue of getting product to market?

K- We don't have this problem in China. That's not a problem.

R: You have a couple of days...

K- No problem. It's already been set up. It's the... It's like... in China, this is so advanced. In Europe, you dream about it, but it's impossible. You order your food...

R: ... We get Chinese vegetables in Canada here, regularly, and they're... they look fresh. They look better than a lot of the local produce.

K- Yeah, they've developed this technology very fast. Even at home you, you can order an ice cream on the telephone and it comes home still frozen. I do that in Beijing, if you want ice cream, you order an ice cream, they deliver it to you, it's still as if it came out of the freezer. And now these lettuces anywhere in China, we deliver, it's all been set up. And Chinese know that. Chinese are fully aware and ?? review. This ship goes across China, in the West they dream about it. It doesn't exist because they haven't seen it in Europe, but it actually exists. You know, you don't go shopping in China anymore. You sit home, you want your tomatoes from this shop, your carrots from the other shop, both delivered in 30 seconds is behind your door. You don't need to sign for it, they just drop and go. And sometimes when I look at my neighbors, they have a pile of 30, 40, 50 boxes and bags, it wasn't there this morning, and sometimes stays for two months, nobody touches.

In Europe, in America, you've seen these funny things people stealing packages, this doesn't happen in China, never happen in China. Nobody takes you, and if sometime you get the wrong delivery, you take it back, says this is the wrong delivery, they take it to where it should be. (2:14) Sometime I leave home for weeks, I come back, it's a pile, my neighbors can take everything, nobody touches it. I don't have that worry. And it's there, and everything, big boxes, small packages, nobody touches it, nobody even dares looking at it. It's not mine, I don't touch. China lives very near at the moment near the Ethos of Mitra in so many ways, out of fear or whatever, but it works. In Europe I'm away for two days I wonder if the neighbors in America is there five seconds stolen. In China I look at my neighbors I look at sometimes I'm away for a few days come back, oh, my god, nothing is missing. You dream what's happening in China because it's only in your dreams but this reality Chinese live with it. You have one of the most advanced nations not in technology but in ethos.

Any other questions?

Q: ... Dear Mr. Keshe, last week you said the Soul of the physicality can consume all the energy available from the Earth? Could you go deeper on what depletes the STP?

K- Nothing. It is the intention, it's the emotion. Your emotion does. What you call selfishness, nothing is good enough and nothing is enough. Even the planet cannot give me. (2:16) What we say in it, we call it, "I'm too good for my shoes." Huh? With the two shoes we call it. This is the behavior of a Man. You ?? are your Soul to receive by your conduct, by your emotion. The arrogance, which is an emotion itself, is the cause of your own demise. Now understand the emotion of arrogance, if you never thought of it, and see how it helps you not to be. Carry on.

R: How would the emotion of love tie into that? And then, comparing love as maybe defined by the physicality, and then unconditional love as that connection to the Soul of

the Creator. ... What would tend to deplete the STP? Or even deplete the Soul for that matter?

K- You don't deplete it, you don't receive it. You don't deplete it. When you don't receive it, you don't get. You have nothing. The reality with the cycle of life is, we deprive ourselves. In the teaching I've said before. It's you who refuses love, it's not me giving. And when you are given a false love and you take it as a true love, that's a chalice, that's a poison. This is where you're emptied, you have nothing to give, (2:18) because it's what I explained this to a Knowledge Seeker some time ago, is the toothbrush and the toothpaste. They tell you the toothpaste is the best thing for you, and you brush it, and it actually is the cause of all your diseases. You empty the pocket of what is in your body, saved. And it's the same with love, this is the same with everything else which goes. And in a way, false love is the same as toothpaste. The body gets emotion and information that the love is coming and there is nothing there in it. Actually you release it because you think you got more ?? some. You show your love and then actually there is nothing left. You use it and you kill yourself with it. You deplete yourself with a promise which wasn't there but you thought it was there.

And this is very common, especially very common. False love and covered up love, you do, because you put more in it, because you think it's there and it shows, but in fact it's empty. It's just to drain you more of, that when it comes to the crisis, you can't stand it, you die. You create a weakness, exactly what happened with you when you do a toothpaste. You wash your mouth with toothpaste, ?? you know, "Oh, I've got a clean mouth." But your body has rejected all the materials, which is supposed to support you, and there's nothing there, because you spit it out. You spit all the thing out of your mouth, in a word, and with love, and everything. But you're already depleted, when it comes to the time, you get a cancer and it kills you. And it's exactly the same as false love. And I've seen this with many Knowledge Seekers. This is why I keep on saying, "Stand on your own feet. Rely on your own trust and do your own." There is no need for Prophets and priests and the rest of it. (2:20) And every time they say, "Oh, Keshe does this because of... Keshe does this because this wants to stop the abuse, you're killing yourself." It's part of the self-preservation of the Soul. And this is what you're born, to preserve the Soul, not the body.

Any other question?

Q: ... If someone goes into a cemetery or an ancient pyramid, can they .. delete their energy of their Soul, let's say, without their will and... or the energy of the STP? In other words, can a ghost or other entity or some environment that we put ourselves in, deplete our energy, to deplete our Soul, in effect.

K- You can do that. You can create a negative energy ?? within your Soul. I've seen it happening, physically happening, especially with the men of robe, the biggest crooks, priests. These religious leaders, they know how to do it. And I watched it happening. And when it happened, because they know how to give themselves up, they've done it so much, it's their... (2:22) stealing is their second habit. I said yesterday, I talked to a

couple of these guys with a man of religion, I said, "Have you ever asked any of the priests to donate in the box on Sunday?" They never do, Have you ever seen the priest putting money in the box? Never do that. They never do it, because they're thieves by nature, they steal from your Soul and they steal from their pocket, why should they put in it? You watch. You take the donation box to a priest, he says, "Move on." I'm here to take, not to give. They take from your Soul, they take from your pocket, they do everything. You ask a Rabbi to pay. Never do.

Any other question?

These kind of questions comes only from Italians, don't worry. They drop too much. You know...

R: The idea of being scared of ghosts comes up, and this is a big issue for many people. And you've mentioned before in the past that with voodoo and that kind of thing, is basically that you didn't believe in it, therefore it didn't affect you. And essentially...

K- ?? it doesn't. You know, you go, you Italians, especially Italian, Italians, you know what I'm talking about. Walk from the Michelangelo church or tower or whatever, to the Vatican. You know that big corridor, it's a boulevard. When you stand on the Vatican city, you look down, you see Michelangelo on the left hand side. (2:24) On the left side as you go up to Vatican, there's a little passage, and they've dug into the mountain behind the Vatican and they built the most elaborate car park, bus stop to bus people in. You don't see it in Vatican, not many people know about it. When you stand on the front of Vatican, look on the left side, you have it like a mountain, a hill. This hill is empty, they have dug into it, it's car parks, everything, to bring people in. When you come out of the car park, just to come to the end and you see the Vatican, it's all windows and homeless people, hungry, in windowsills. Go to the left, the bridge, it's full of cardboard boxes, hungry people.

Then, go around the Vatican, toward the upper side of Vatican, on the other side of Vatican. Go there at 10 o'clock, 11 o'clock, 8 o'clock at night. You see nothing but prostitutes, naked more or less. Every night, rain, shine. They collect money for the Vatican, but Vatican doesn't give it to the poor people on the left side. I said to one of these homeless people, "Why did you go on the other side of the Vatican, you make a lot of money?" He said, "I don't look good and I'm a man." This is the story of Vatican, this is the story of religion, robbing and not giving. No woman should sell herself on one side, and no Man should go hungry on the other side. All stops in the middle. (2:26) But who are they stealing it for? This is my biggest question. Who are they taking all these monies for? Themselves. Nobody else. And this is where the Soul pays. This is where no physical dimension, Dr. Professor, Mrs. Madam, doesn't count.

I remember my emotion when I saw this in Vatican in Rome the first time. I said, this is impossible. This is Vatican. How can these girls be naked, strip naked on the street next to the... Oh, they pay, they work for Vatican. Their pimp is Pope. Otherwise, they can't operate. You go to Italy and get a driver, take you around the whole of the Vatican City at

night. You see hunger on one side and prostitution on the other side. and one gets and that one doesn't pay anything out.

Any other question?

Q: ... Mr. Keshe, can you let us know what the Russians are actually doing in the Plasma Field? How far advanced are they?

K- Extremely advanced, the Russian Space Technology is extremely advanced, especially in plasma. Very, very advanced. I'm hoping to bring at least, if the government allows, couple of dozens of them into the Space Center. It's a big bargain with Russians. I've talked with them long enough. It's a big bargain. (2:28) They want to come to learn to take. The Chinese, they're sitting in us anyway, in new Space City, trying to bring Space Scientists from Iran, negotiating with two or three other governments, zone free, come and take, don't steal but share, and it's very hard for scientific world to do. But we get there, gradually we get there.

Russians in Space Technology are 20 years ahead of America, minimum. Chinese are catching up, but I said to a member of Secrecy (?? Security), it's very recently, he said, "You know something, you're Africans." I said, "You're doing exactly what is happening in Africa." He said, "Why you're comparing us to the Africans?" I said, listen, in Europe, in America, they put all these cables down, they haven't got their money back, so they are not so good in wireless telephones and all the Apps. In Africa they never had it, now they got it and they have the latest and they work the fastest, all the thing comes up. You Chinese are the same, you didn't have it, and now your scientists stole everything from everywhere, put it in, but now some of them, they had no ground, so they come up with totally new ideas which does not connect to what they came with the cables. It's like a new mobile phone. Everything is in it. This is what we see in China now.

We don't see new scientists and that's why everything comes out of Chinese, something amazing, whatever. The Chinese educated people now, they have a zero ground. They can't create them a zero ground. You have to understand how it works there. And now the new scientists come up with something which in the West we are forced to accept, (2:30) they don't accept. They say this is what I think and the government gives them ground to do it. Look at the new AI, look at the new computers, look at the new Chips. And in the West they shout, they haven't stolen anything from the West. The new, I mean, because it's new, it's like our technology, it brings a new dimension. Because you, because you didn't think of it, you didn't put in a patent, now it's not yours, because you can't copy the patent. I keep on telling the Chinese, "Don't patent anything, just develop it, and keep it inside." And we see that, because they don't follow the rules, they make new rules, they making the new rules, leads to new discoveries, new ways of doing things, is much efficient.

And the new generation Chinese universities are very receptive to this. Very receptive. The old generation of Tesla said this, Einstein said this, to the wall, I say this and I try, works, government supports. This is what you see in our research centers. I don't want

old people, we want the young people with the new ideas come in try. You fail, we accept failure as part of success and this is what has to happen. New grounds for new way of looking at it, not sticking to stupid Einstein and bunch of Jewish people telling us this is the law. There is no law in the physics, you understand it becomes your law. Works, it means you understood the Creation. Doesn't need patent. God never send any patent. Can you imagine how many patent flights would have been to Earth, send patents in that they can't copy? He doesn't have a patent, we don't patent it, we deliver it. (2:32) We bring as a technology and the rest benefit by it. Patenting is for pedophiles and thieves. They get benefits from both sides of it.

Any other question?

Q: ... Mr. Keshe mentioned something last week about the people who bought the Cosmic Ray Balls and you said that you had done something to them but they did not know what. Can you say more about that?

K- No, I have to be corrected. Apparently we have, I've just been told that there is, they produce some 20, 30 Cosmic Ray Balls is still left. Or they produced a batch I wasn't aware of. So if you want, it's not the last one thing about 20 and that'll be it. We don't produce any more of it. I think there is a few left, which I didn't know. So I'm wrong, I was wrong. And if you need it, I'll be here till the end of the process. Because we need whatever we produce for our systems. There's not much I can tell you about the Cosmic Ray, because you have to understand the principle behind their production. And you're not in there, you don't see it. But on the other hand, it's part of the intention which goes in it, which is beautiful. One day I explain that. (2:34) But the Cosmic Ray Balls are the Black Holes of Universe, as I call it. And your intention is the key to open. You have to understand the rest of it.

Any other question?

Q: ... Can a Pain Pen be used to remove depression?

K- No. Depression is the energy, ?? psychological. Pain Pens are built for physical. No way.

Q: ... Can you touch on solid light? I've seen a UFO shine a light outwards, outwards to the ground, and it stopped mid-air and retracted from the tip of the light back to the craft.

K- Good luck. ?? They've been very lucky. Light has its own reflection, if you know how to play with it. Magnetic field has a reflection, if you know how to play with it. And you can do, but you have to know how to make it, yes. I can create a light which stops a meter, 100 meter or 10 centimeter from the torch, or the source. And you say, "It doesn't exist." But it does. If you understand the, what you call it, the science behind it. (2:36) You can do and it's very easy. It costs 10 cents to do it if you want to make it. But Man's knowledge is not at that level. In the lab we have developed a light to reflect. We can

reflect the light in the essence of it, in any shape or form. And create as energy material out of it. This machine is in the process of going through tests.

Let's call it a day.

Thank you very much indeed, and if you play the same video for your closing, what we had in Intro, he shows changes, evolution of science and technology.

R: The Intro video, the AI one?

K- No, Intro one, if you can play. The one from the center in China, and then we show up all next time.

R: Okay, okay. That one.

K- This is done with all your support, and there is much more to come. Much, much more to come. And thank you very much for supporting us to be here, and I'm always very open and say, we need more support to go into the next level. See you next week.

644 KSW – May 28th, 2026

End
